Title Number & Check Digit

- Title number - a sequential number assigned by the publisher
- Check digit - a calculated number added to detect human typographical errors
 - Transposing adjacent numbers
 - 76 becomes 67
 - Doubling the wrong digit
 - 667 becomes 677

ISBN-13

- Why?
 - Expand pool of numbers
 - Align numbering system with EAN
- When?
 - As of 1 January 2007 all publishers will only issue 13 digit ISBNs
- How?
 - Two prefixes, 978 used with ISBN-10 and 979

Converting ISBN-10 to ISBN-13

1. Drop check digit from ISBN-10
2. Add prefix 978
3. Multiply each digit by the appropriate weight factor
4. Total all the products
5. Divide by the modulus (10), and calculate the remainder
6. The new check digit equals the modulus minus the remainder

Example - Steps 1 & 2

ISBN-10 0-02-661358-1

digit	1	2	3	4	5	6	7	8	9	10	11	12	13
ISBN	9	7	8	0	0	2	6	6	1	3	5	8	
Weight Factor	1	3	1	3	1	3	1	3	1	3	1	3	1

Example - Step 3

What should I expect from vendors?

- Publishers
 - All new items (starting with items published in 2007) will have ISBN-13
 - Most recent items should also have ISBN-13
 - All paperwork (invoices, shipping tickets, etc.) that list an ISBN should use ISBN-13
- Software vendors
 - You should be able to enter & search ISBN-13 and ISBN-10
 - Existing ISBN indexes should be converted to ISBN-13
